

Exercise 2: Rule Based WF

Estimated Completion Time: 1 hour

Overview

This exercise explains steps to define Rule Based WF using BRF+. Standard steps from MAT01 CR Type are imported and extended.

Instructions

Change the WF template in CR type and Assign steps.

Import Standard Steps for WF

Test Standard Steps in WF

Add Additional Step in WF

Test the Application

Add Custom Action, Step and Status

Test the Application.

Solution:

Prerequisite:

There should be an existing application with Data Model and UI model defined. create a new CR type with Rule Based Workflow. Refer exercise 1 for the same.

Change the WF template in CR type and Assign steps.

Log on to MDG system.

Goto T-Code MDGIMG

Goto General Setting Processing Modelling Change Request Create Change Request Type

Select 'New Entry' and provide information as per following snapshot.

Hit Enter and select the entry and provide information in Entity Type and Business Activity as follows

Save the Configuration.

Ignore the Warning Message and provide a TR.

Come out of the setting and goto Workflow Rule-Based Workflow Define Change Request Steps for Rule-Based Workflow.

Click on 'New Entries' and provide information as follows.

Save the Configuration.

Step 1 of this document completed.

Import Standard Steps for WF

Goto T-Code MDGIMG

Note: If you already have Decision Tables then goto Step: 8.

Or Else if you want to skip these steps and use the Decision tables downloaded by me, then goto step 7.

Goto General Setting Process Modeling Workflow Rule-Based Workflow Configure Rule-Based Workflow.

This will open Browser Session.

Provide 'Type of Change Request' as MATA01 and click on continue.

Navigate and expand Decision Tables

Select and open one table at a time and download them into excel and Close the Browser.

The above exported Decisions tables are attached here to be used in next step.

Goto General Setting Process Modeling Workflow Rule-Based Workflow Configure Rule-Based Workflow.

This will open Browser Session.

Provide 'Type of Change Request' ZZCR02 and click on continue.

Navigate to 'Decision Table' and select 'Single Value Decision Table'

Click on Edit.

From Addition Actions, click on 'Import from Excel'

Select the file which you have downloaded in Step-6 or File provided in Step-7.

Save and Activate the data.

Repeat the steps 11-14 for other two tables.

In User Agent Decision Table change the 'User Agent Value' with the approver ID. I have used MDMSAP which is my ID. You have to update it with appropriate ID as required; this ID will be processing/approving the requests.

Save and activate if you have done any changes and close the browser.

This is End of Rule Based Workflow Basic configuration which involves only one Step of approval.

Test The Standard Steps in WF

Goto NWBC T-Code.

This will open up a new browser session.

Select the role created for out Object 'ZZ_SAP_MDGX_MENU.

Click on 'Create Change Request'

This will open a new browser, provide required inputs and click on Continue.

Note: Change Request type should be 'CR for BRF+WF'

Provide Material Details and Click on Submit and Note the CR Number.

Close the window.

Click on 'My Change Request'

Select the requested ID submitted.

This will open a new window. Verify the data and click on 'Activate'.

This will complete the workflow and data will be activated.

Close the window.

Refresh in 'My Change Request', it should show WF status as 'Final Check Approved'.

With this the initial BRF WF execution is completed.

Add Additional Step WF

To Add Additional Step level of WF goto T-Code - MDGIMG.

Goto General Setting Process Modeling Workflow Rule-Based Workflow and execute 'Define Change Request Steps for Rule-Based Workflow'

Click on 'New Entries' and add a new step as follows:

Save the Configuration.

Now Navigate to 'Configure Rule-Based Workflow'.

This will open a new Browser Session

Provide 'Type of Change Request' and click on Continue.

Navigate to 'Decision Tables' and select 'Single Value DT'

Click on Edit.

Add two new Entries after First Entry.

Edit first Row and provide Data in other two rows as follows.

Save and Activate the Data.

Select 'User Agent Decision Table'

Click on Edit.

Remove Condition Alias '1' from first Row and add a new Row for it, as follows,

Save and Activate the Changes.

BRF+ Tables are extended to one more new level of approval.

Complete of this step.

Test The Application

Goto T-Code NWBC.

This will open up a new browser session.

Select the role created for our Object 'ZZ_SAP_MDGX_MENU.

Click on 'Create Change Request'

This will open a new browser, provide required inputs and click on Continue.

Note: Change Request type should be 'CR for BRF+WF'

Provide Material Details and Click on Submit and Note the CR Number.

Close the Window.

Goto 'My Change Request' and open the request.

At first level of approval it will have Approve and Reject Buttons. Approve the request.

Open the request again from 'My Change Request' Now you will have Activate Change Request option.

Activate the Request.

This will Complete the WF.

With this I have additional level of step in WF.

This step is completed.

Add Custom Action, Step and Status

Here we will be adding Custom defined Status, Action, Step and a new Step for WF, currently the WF has 2 levels, we will be adding one more level and in total there will be 3 steps in WF.

Goto T-Code MDGIMG

Goto General Settings Process Modeling Change Requests Edit Status of Change Requests.

Click on 'New Entries' and Added new Status and save the Configuration.

Goto General Settings Process Modeling Workflow Define Actions for Change Request UIS

Click on 'New Entries' and add data as follow and save the setting.

Save the Actions.

Goto General Settings Process Modeling Workflow Define Step Types and Assign Action

Click on 'New Entries' add data as follows

Hit Enter and select 'Assign Actions'

Click on New Entries and Provide Actions created in previous step.

Save the configurations.

Goto Workflow Rule-Based Workflow Define Change Request Steps for Rule-Based Workflow

Click on 'New Entries' and add a new Step as follows

Save the Configuration.

Goto Workflow Rule-Based Workflow Configure Rule-Based Workflow

This will open up BRF+ Browser Session.

Provide Type of Change Request and Continue.

Navigate to Decision Tables.

Select 'Single Value DT' and Click on Edit.

We will Add a new step after submission of request. Hence add two new rows after first row.

Add/Modify data as follows:

Save and Activate the Request.

Select 'User Agent DT'.

Click on Edit.

Add new Row for Condition Alias 10 and provide data as follows

Save and Activate the data.

Test The Application.

Goto T-Code NWBC.

This will open up a new browser session.

Select the role created for our Object 'ZZ_SAP_MDGX_MENU'.

Click on 'Create Change Request'

This will open a new browser, provide required inputs and click on Continue.

Note: Change Request type should be 'CR for BRF+WF'

Provide Material Details and Click on Submit and Note the CR Number.

Goto 'My Change Request', Here you can see new status as defined in Step – 4 of previous Configuration Steps...

Open the Change Request.

Here you will see two new Buttons/Actions defined in Step-6 of previous Configuration Steps.

'ZZ Approve' the request.

And next the WF will go to two more steps, process them.

Workflow gets completed.

This way we have added 3 steps to BRF WF.

Demo and Document Completed.
